## Getting ready for your Ontario's Drive Clean Emissions Test.

The Drive Clean test will check that your vehicle's emission control system meets the standards for which it was designed – but your vehicle cannot be tested if:

- The gas tank cap is broken, faulty or missing.
- The exhaust system or catalytic converter has holes, missing parts, or other damage.
- The vehicle has major fluid leaks or serious mechanical faults that could cause damage or affect safety during the test.
- The tires on the drive wheels are damaged or excessively worn.
- There is visible smoke.

You must fix these things before your vehicle can take a Drive Clean test.

### **Tune it up and book your test early!**

A tune-up helps your car run better and last longer. And a car that's tuned-up will more likely pass a Drive Clean test.

**For the air we breathe.**

# Protecting Our Air

In the last three years, your provincial government has taken a number of initiatives to improve Ontario's air quality:

- Launched Ontario's *Drive Clean*, which will cut smog-causing pollutants from vehicles by an average of 22%.
- Began updating Ontario air quality standards and regulations - some of which are more than 20 years old - to make them better, stronger, and clearer.
- Required gasoline refiners and blenders to produce less polluting gas formulas during the summer.
- Besides fighting smog, Ontario is helping Canada meet its international commitment to reduce greenhouse gases, the group of pollutants - including carbon dioxide and methane - that can cause changes in the global climate.
- Launched *Partners in Air*, a partnership of high schools, government, business and industry. The program educates and involves students in air quality monitoring and experiments.
- Introduced Ontario's Smog Patrol, an enforcement program to get grossly polluting cars, trucks and buses off the roads.
- To find out more, call the Ministry of the Environment at (416)325-4000 or 1-800-565-4973 or visit [www.ene.gov.on.ca](http://www.ene.gov.on.ca).
